

Nuclear power doesn't
just create energy.
It creates a future.

Plant Vogtle units 3 and 4 will be the first and only new nuclear units built in the U.S. in more than 30 years, while currently there are more than 50 nuclear plants being built around the world. Once online, the new Vogtle units will provide Georgians with reliable, carbon-free energy that will power 1 million homes and businesses for 60 to 80 years – while putting downward pressure on rates. It's also the largest job-producing construction project in the state, currently employing over 7,000 people, with more than 800 permanent jobs available once the units begin operating. We are making an investment in Georgia, helping to drive the state's thriving economy and preparing for the growing demand on energy – ensuring clean, safe, reliable and affordable energy for generations to come.
